

ACCUMULATOR OFFERINGS

- **Current offering:**
 - + Enhancer Plus
 - Significant premium for producer, with double up potential that exists until expiration unless KO'd
 - + Originator Plus
 - Same as enhance plus, with added benefit of selling unaccumulated bushels at defined “remainder” level if KO level is reached.
- **New offerings:**
 - + Enhancer Reserve
 - Also known as daily double up – each day that the structure has no KO'd, and price is at/above accumulation level, 2x the daily volume is sold.
 - **Benefit is an attractive selling level vs current market, but double up risk erodes each day futures is below accumulation level.**
 - + Originator Reserve
 - Same as Enhancer Reserve, but with a remainder feature that allows for pricing remaining bushels at defined level if a KO occurs.
 - + Enhancer with no double-up
 - Allows producer to sell approximately 5% above current market, but no double up risk.
 - **Premium is possible due to the fact that a KO potential still exists – so risk is producer not selling bushels if market trades sharply lower.**
